

PRESENTS

A Comprehensive Analysis of Bauxite Residue (Red Mud)

Sustainability, Resource Recovery and
Strategic Recommendations

MAY, 2026

www.alcircle.com

Contents

I. Executive Summary

- E.1 Global alumina production overview, 1975 – 2025 & forecast 2036
 - E.2 Global red mud generation snapshot, 2025 & forecast 2036
 - E.3 Key findings and strategic outlook
-

II. Introduction

- 2.1 Scope of the report 2025 & forecast 2036
 - 2.2 Research methodology
 - 2.3 Industry stakeholders covered
-

III. Overview of Bauxite & Alumina Industry

- 3.1 Global bauxite reserves and mining trends, 2015 – 2025 & forecast 2036
 - 3.2 Bauxite quality and processing
 - 3.3 Alumina production trends, 2015 – 2025 & forecast 2036
 - 3.4 Upcoming alumina refinery projects
 - 3.5 Key alumina producers
 - China domestic (2015 - 2025)
 - Australia (2015 - 2025)
 - Indonesia (2015 - 2025)
 - Brazil (2015 - 2025)
 - India (2015 - 2025)
 - 3.6 Decarbonisation trends in alumina refining
 - 3.7 Digitalisation and automation in refinery operations
 - 3.8 Refinery case studies
-

IV. Introduction to Red Mud (Bauxite Residue)

- 4.1 Overview of red mud
 - 4.2 Bayer process and residue generation
 - 4.3 Physical and chemical properties
 - 4.4 Hazardous nature and environmental concerns
 - 4.5 Major red mud spill incidents
 - 4.6 Storage and disposal technologies
 - 4.7 Rehabilitation and remediation of red mud ponds
 - 4.8 Dry stacking and advanced residue storage systems
 - 4.9 Carbon footprint of red mud management
-

V. Global Red Mud Generation Analysis

- 5.1 Historical red mud generation trends, 1975 – 2025
 - 5.2 Region-wise red mud generation, 1975 – 2025
 - 5.3 Country-wise red mud generation (Including Asia, Ocean, North America, South America, Europe, Middle East), 2015 - 2025
 - 5.4 Refinery-wise red mud generation analysis
 - 5.5 Refinery expansion projects and future residue generation potential
 - 5.6 Impact of refinery expansions in India, Indonesia, Guinea, and China
 - 5.7 Forecast of global red mud generation till 2036
-

VI. Country-Level Opportunity Analysis

- 6.1 China
 - 6.2 India
 - 6.3 Australia
 - 6.4 Indonesia
 - 6.5 Brazil
 - 6.6 GCC
 - 6.7 Africa
-

VII. Red Mud Storage & Disposal Infrastructure

- 7.1 CAPEX & OPEX structure of Disposal
 - 7.2 Land Requirement Analysis
 - 7.3 Dam Safety Risks
 - 7.4 Major Red Mud Disposal Incidents
-

VIII. Investment & Business Opportunity Assessment

- 8.1 Market opportunity by sector
 - 8.2 ROI potential
 - 8.3 Potential buyers of red mud
 - 8.4 Circular economy business models
-

IX. Red Mud Utilisation & Valorisation

- 9.1 Overview of red mud utilisation
 - 9.2 Recovery of iron, alumina, titanium, scandium and rare earth elements
 - 9.3 Rare earth extraction technologies from red mud
 - 9.4 Cement, ceramics, bricks and construction applications
 - 9.5 Red mud utilisation in road construction and infrastructure
 - 9.6 Metal recovery through pyrometallurgical and hydrometallurgical methods
 - 9.7 Red mud in carbon capture and environmental applications
 - 9.8 Red mud utilisation in wastewater treatment
 - 9.9 Geopolymer and green building material applications
 - 9.10 Emerging start-ups and technology providers
 - 9.11 Country-level utilisation practices
 - 9.12 Select alumina producers and residue management strategies
 - 9.13 Successful utilisation case studies
-

X. Government Regulations, ESG & Sustainability

- 10.1 Global environmental regulations related to red mud
 - 10.2 India's red mud management guidelines
 - 10.3 Tailings dam and residue storage regulations
 - 10.4 ESG reporting and sustainability benchmarks
 - 10.5 Circular economy policies in the aluminium industry
 - 10.6 Net-zero strategies and implications for residue management
-

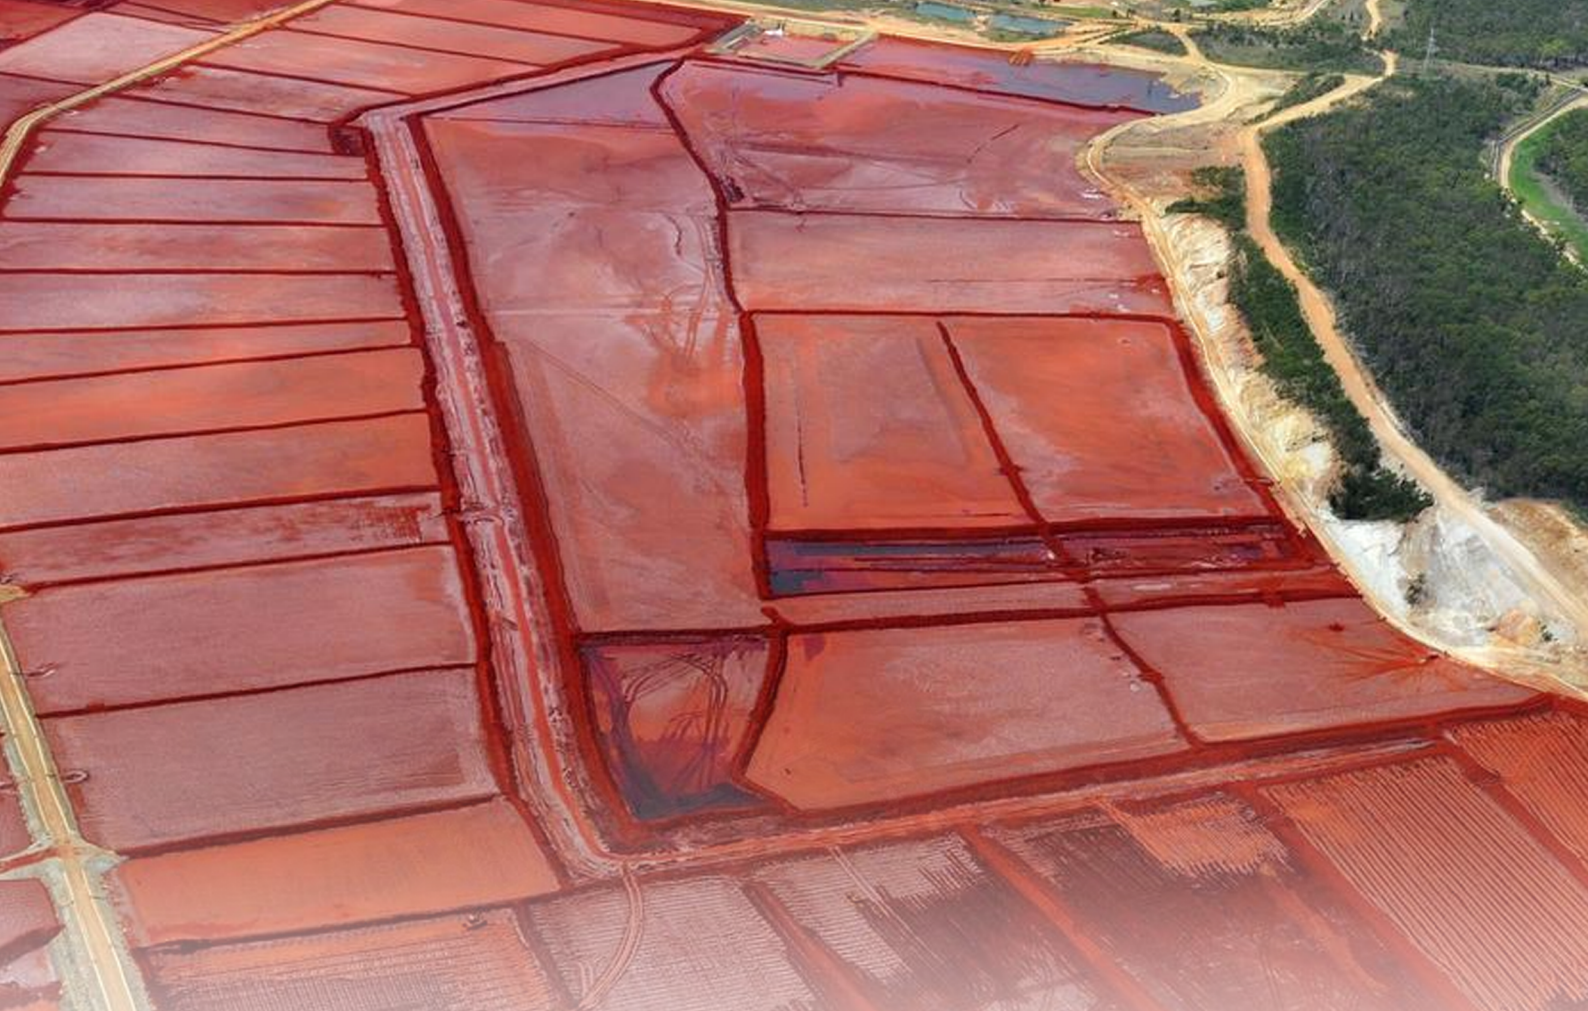

XI. Future Outlook & Strategic Roadmap

- 11.1 Future technologies in residue utilisation
 - 11.2 Innovations in residue monitoring
 - 11.3 Critical minerals opportunity from red mud
 - 11.4 Forecast for utilisation rates by region
 - 11.5 Strategic roadmap for industry stakeholders
-

XII. Conclusion

- 12.1 Key conclusions
 - 12.2 Long-term industry outlook
 - 12.3 Final recommendations
-

*Disclaimer: The data and information presented in this report have been collated from various secondary sources, on a best-effort basis, by **AL Circle Pvt. Ltd.** This report intends to provide a flavour of the red mud (bauxite residue) sector. Further detailed studies are recommended before undertaking any business or investment decision. While every effort has been taken to gather and present reasonably accurate data & analysis, **AL Circle Pvt. Ltd.** does not accept any direct or indirect legal liability of any kind for the content of this report or arising out of any business decision or action taken by the client.*

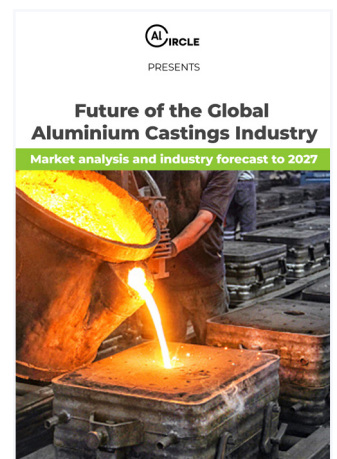

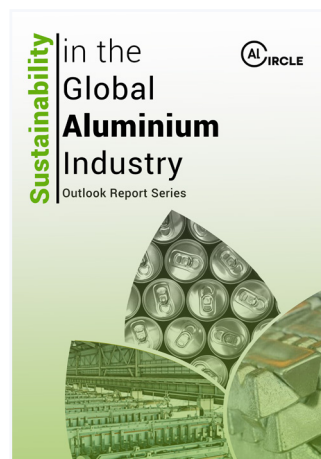

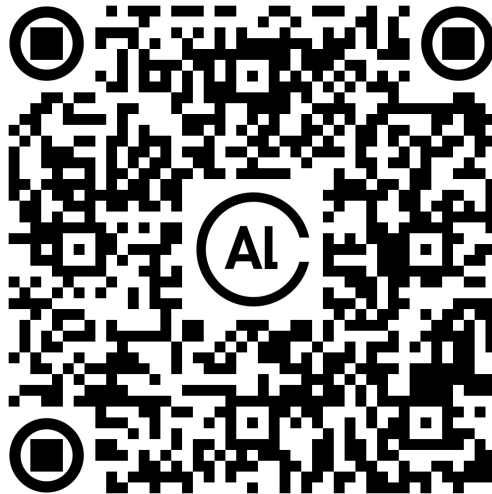

A comprehensive analysis of Bauxite Residue - Red Mud

The management of and methods of storing bauxite residue have evolved progressively over the decades. It involves the processes and practices employed to handle, store, treat, and utilise this byproduct to minimise its environmental impact and enhance its economic value.

AL Circle's industry-focused report, "**A Comprehensive Analysis of Bauxite Residue - Red Mud**," will provide invaluable insights into one of the most pressing environmental and industrial challenges associated with aluminium production. The report thoroughly examines the composition, environmental impact, and innovative management strategies for bauxite residue, commonly known as red mud. By delving into cutting-edge technologies for its utilisation and recycling, regulatory frameworks, and case studies from industry leaders, readers can understand how to mitigate risks and capitalise on opportunities within the sector. This report is essential for industry professionals, policymakers, and environmentalists looking to stay informed about sustainable practices and advancements in bauxite residue management.
